2. Biological Activity

Ostarine (MK-2866) is an androgen receptor modulator (SARM) with an ED₅₀ of 0.44 mg/day. Ostarine (MK-2866) has anabolic activity. Lack of PSA increases in men and hair growth in women further corroborated selective anabolic effects of Ostarine (MK-2866). Ostarine (MK-2866) also resulted in a dose-dependent decrease in LDL and HDL cholesterol levels, with the average LDL/HDL ratio for all doses remaining in the low cardiovascular risk category.
